

The Safran Museum is exhibiting at the Paris Air Show

This year, the Safran Museum stand will once again exhibit some of its most emblematic pieces at the Paris Air Show. An opportunity to meet and chat with all the enthusiasts on the stand!

The Paris Air Show is the ideal setting in which to familiarize a large audience with the epic history of the aerospace industry through an exhibit of a number of flagship products from past decades. For example, on the Safran Aerospace Museum stand you will be able to find:

- The Omega rotary engine that equipped aircraft in the early twentieth century,
- A model of an Ariane 4 launcher
- The Larzac engine, which powers the Patrouille de France's Alpha Jet
